A MEMO ON “ON THE KLEIMAN-MORI CONE”

OSAMU FUJINO

In Example 5.7 in [F], there are two minor errors. One of them is a typo. In line 9 in Example 5.7, $Q'$ is not $f^*Q - E$ but $\pi^*Q - E$. We note that $\pi : X \to \mathbb{P}^3$ is the blow up of $\mathbb{P}^3$ along $C$. Another one is a simple computational error, which was pointed out by Professor Yifei Chen. I like to thank him. The intersection number $\mathcal{L} \cdot f'_1 = \mathcal{L} \cdot f'_2$ is not 1 but 2. Fortunately, this error does not affect the following arguments in Example 5.7.
