

Contents

1	Hilbert space and bounded linear operators	5
1.1	Hilbert space	5
1.2	Vector-valued functions	9
1.3	Bounded linear operators	11
1.4	Special classes of bounded linear operators	13
1.5	Operator-valued maps	17
2	Unbounded operators	19
2.1	Unbounded, closed, and self-adjoint operators	19
2.2	Resolvent and spectrum	23
2.3	Perturbation theory for self-adjoint operators	25
3	Examples	31
3.1	Multiplication and convolution operators	31
3.1.1	The harmonic oscillator	35
3.2	Schrödinger operators	35
3.2.1	The hydrogen atom	36
3.3	The Weyl calculus	37
3.4	Schrödinger operators with $\frac{1}{x^2}$ -potential	39
3.4.1	Two families of Schrödinger operators	40
4	Spectral theory for self-adjoint operators	43
4.1	Stieltjes measures	43
4.2	Spectral measures	45
4.3	Spectral parts of a self-adjoint operator	51
4.4	The resolvent near the spectrum	55
5	Scattering theory	63
5.1	Evolution groups	63
5.2	Wave operators	67
5.3	Scattering operator and completeness	73

6	Commutator methods	77
6.1	Main result	77
6.2	Regularity classes	78
6.3	Affiliation	82
6.4	Locally smooth operators	86
6.5	Limiting absorption principle	88
6.6	The method of differential inequalities	90
