

Linear algebra I & II

Table of contents

- 0) Motivation
- I) Geometric setting
 - I.1) Points and vectors in \mathbb{R}^n
 - I.2) Located vectors in \mathbb{R}^n
 - I.3) Scalar product in \mathbb{R}^n
 - I.4) Norm and scalar product in \mathbb{R}^n
 - I.5) Parametric representation of a line
 - I.6) Planes and hyperplanes
- II) Matrices and linear equations
 - II.1) Matrices
 - II.2) Homogeneous linear equations : the case ($\#$ unknowns) $>$ ($\#$ equations)
 - II.3) Row operations and Gauss elimination
 - II.4) Elementary matrices
- III) Vector spaces
 - III.1) Abstract definition
 - III.2) Linear combinations
 - III.3) Convex sets
 - III.4) Linear independence
 - III.5) Dimension
 - III.6) The rank of a matrix
- IV) Linear maps
 - IV.1) General maps
 - IV.2) Linear maps
 - IV.3) Kernel and range of linear maps
 - IV.4) Rank and linear maps
 - IV.5) Matrix associated with a linear map
 - IV.6) Composition of linear maps
 - IV.7) Inverse of a linear map
- V) Scalar product and orthogonality
 - V.1) Scalar product and orthogonality
 - V.2) Bilinear maps
- VI) Determinant
 - VI.1) Multilinear maps
 - VI.2) The determinant
 - VI.3) Cramer's rule and inverse of a matrix
- VII) Eigenvectors and eigenvalues
 - VII.1) Eigenvalues and eigenvectors
 - VII.2) The characteristic polynomial
 - VII.3) Eigenvalues for symmetric matrices
 - VII.4) Complex vector spaces
- VIII) Applications
 - VIII.1) Discrete dynamical systems
 - VIII.2) $25'000'000'000$ eigenvector
